**NC4 Unveils Comprehensive Risk Management Solution at ASIS International,  
Booth #3457**

*NC4's Risk Center™ Mitigates Risk to Protect Corporate Interests Worldwide*

EL SEGUNDO, CA – October 12, 2010 – NC4, the leader in Situational Readiness solutions for risk management, today announced the unveiling of the NC4 Risk Center™ solution at ASIS International. This electronic warning service can be configured with a variety of powerful components to better support the needs of corporate security, business continuity, supply chain and travel managers.

Real-time situational awareness and alert notifications have been a hallmark for NC4 over the past decade. Operating from redundant 24x7 east and west coast Incident Monitoring Centers, these real time alerts will continue to be at the core of the NC4 Risk Center. These functions are now augmented with global predictive intelligence, enhanced analysis and threat information. In addition, a travel risk management component provides organizations with a comprehensive view of travel risk exposure for employees and expatriates.

“U.S. and global corporations are seeing increasing risks to their domestic and international operations, traveling employees, and supply chains,” said Jim Montagnino, President and CEO of NC4. “We have assembled a powerful set of components that customers can leverage within the NC4 Risk Center solution to better manage their operational risk.”

By configuring the solution to customer’s specific needs, NC4 supports a holistic view of operational risk to enable customers to quickly learn about risks threatening assets, operations, suppliers, and employees. The NC4 Risk Center helps organizations to ensure business continuance, protect the health, life, safety and productivity of employees, streamline risk-related decision-making processes, and reduce labor costs. In addition, other optional NC4 components,

such as the capability for secure communication and collaboration, may be incorporated into NC4 Risk Center to further enhance an organization's Risk Management program.

Genzyme's security team, long time users of NC4 services, is at the forefront of Enterprise Risk Management with their business-based approach to security and risk mitigation. "NC4's Risk Center helps us in our efforts of improving our capabilities for monitoring, analyzing and responding to threat information. With NC4's Risk Center, we are in a better position to deliver actionable business intelligence to the enterprise to help us protect our corporate interests worldwide." says Bhavesh Patel, Senior Director of Global Risk and Business Resources. Bhavesh adds, "We work with many technologically savvy companies such as NC4. What sets NC4 apart is that not only do they have superb technology, but they also listen and react to their customer's needs."

NC4 is previewing the new NC4 Risk Center capabilities this year at the American Society for Industrial Security (ASIS) International Conference to be held in Dallas, Texas, October 12<sup>th</sup> through 14<sup>th</sup> in booth #3457. Individuals are invited to stop by the booth for additional information or to contact NC4 at [info@nc4.us](mailto:info@nc4.us) for a personalized demonstration.
